

Node - state.

State = -1

Pre. - add
state + 1;

$0 \leq \text{state} \leq \text{no. of children}$
push child in
stack

state + 1

→ pre-order

10 20 50 60 30
70 80 110 120 90 40
100

→ post-order → 50 60 20 70 110

120 80 90 30 100
40 10

State = no. of children

post - add
state.

State \geq no. of child

pop-out // correct
