

Is Binary Search Tree

- ① value < root.data → left side
- ② value > root.data → right side

To check is BST

Common mistake -
⇒ ~~not left.data < root.data < root.right.data~~

Solution: (check on every node)

left → max < root.data
right → min > root.data

$O(n^2)$

for

Self check T.

left \rightarrow T

right \rightarrow T

return True

Is Balanced

-1, 0, 1

→ Balanced $O(n)$

height $O(n)$
